PROFESSIONAL EXPERIENCE

- Working in HCL Technologies, Chennai from Jan' 2022 to till date.
- Worked in Amshuhu Itech Solution, Chennai from Jun' 2021 to Dec' 2021.

Project Title	**S21F1 Platform Validation & Reliability Automation**
Operating System	Linux, Windows
Client	Microsoft
Programming Languages	Python
Tools	Azure DevOps, Jenkins
Role	Senior Software Engineer (Python Automation Developer)
Duration	June 2024 – Present

Project Description:

The S21F1 project focused on automating validation workflows for next-generation compute and storage platforms. The objective was to improve test efficiency and accuracy of regression, cycler, and longevity testing through robust Python automation.

Responsibilities:

- Built automated reporting dashboards for regression and cycler outcomes, improving visibility into platform stability and readiness metrics.
- Collaborated with validation, firmware, and tools teams to identify automation gaps and drive faster defect closure.
- Implemented testbed health and firmware validation checks (BIOS/BMC/IPMI), ensuring 100% environment readiness before test runs.
- Automated cycler iteration handling and failure triage, cutting average debug time per issue by 40%.
- Integrated automation workflows with Azure DevOps pipelines for build deployment, test execution, and log archival.

- Enhanced the stress orchestration framework to support multi-SKU automation with parallel execution, improving test throughput by 30%.
- Developed and optimized Python automation scripts for regression, sanity, and cycler validation, reducing manual test effort by ~50%.

Project Title	**Network Operation Engine**
Operating System	Linux
Client	NEC- Japan
Programming Languages	Python
Framework	RHEL Ansible
Tools	Putty, WINSCP, SVN
Role	Software Developer
Duration	Two Years and Four Months

Project Description:

NEC's Network Operation Engine (NOE) provides network automation and virtualization managed through an easy-to-use management interface. It simplifies day to day network management with drag-and-drop network configuration and high-availability resulting in a secure, flexible, and centrally configurable enterprise network. NOE allows the creation of multiple virtual networks (using a single common physical network) for each category of devices and create the optimal configuration and isolation for each virtual network.

NOE-AnsibleModule, part of Network Operation Engine Product, is a software component used to interact with NEC QX and IX Devices. The project is based on SD-WAN Configuration Application using physical and virtual devices.

Ansible Module is the south bound interface of NOE where it communicates with the L2 and L3 Devices. Using Ansible Component, we perform and automate device configuration and deployment on the physical and virtual devices.

Responsibilities:

- Worked in Enhancements development in NOE-AnsibleModule component.
- In the NOE-AnsibleModule component enhancements, implemented new devices CLI commands support.
- Developed Ansible playbooks using Python to automate the deployment tasks.

- Developed custom Ansible modules and plugins using Python to extend Ansible's functionalities to meet specific project requirements.
- Developed automation regression scripts using Python for Ansible modules to validate robust performance.
- Mentored and gave KT for the Juniors/new resources to understand the customer requirements of the product.
- Prepared unit test scripts for the respective developed python modules.
- Developed web backend modules using Python to ensure seamless integration with NOE-AnsibleModule.
- Contributing to the development of GUI automation for the NOE Web-UI Component using Robot Framework.
- Analysing, Reproducing and Resolving the field issues related to both Ansible and GUI components to ensure the quality of the product.
- Involved in Requirements analysis, test plan, test scenario’s, test cases, automation development and execution.
- Specifications and Test Documents registered in SVN.
- Agile Methodology

Project Title	**Sales and Marketing Integration**
Operating System	Linux
Client	SHELL
Programming Languages	Angular JS, PHP and MySQL
Role	Software Developer (Intern)
Duration	Seven Months

Project Description:

Sales and Marketing Integration (SAMi) application designed to provide in-depth sales data for the SHELL business. Our platform offers a user-friendly interface for managing and analyzing sales data, streamlining day-to-day operations across various countries. Tailored for SHELL distributors, SAMi serves as a powerful tool for post-data analysis, offering insightful dashboard features to enhance sales force efficiency and decision-making.

Responsibilities:

- Developed a Full Stack Web Application that seamlessly processes, analyses, and visually renders sales data.
- Develop and manage the dashboard, aligning its design structure with user requirements.
- Improve front-end performance through the implementation of scalable code, minimization techniques, and effective issue troubleshooting.
- Collaborate and contribute to team efforts in designing, building, and maintaining relational databases.
- Conduct integration testing to ensure seamless interaction between various components of the application.
- Analysed the customer reported issue and provided the root cause.

AWARDS AND APPRECIATIONS

- Received "**ERS Knowledge Champion (JAS-2023) and (JFM-2024)"** Award.
- Received **"ERS Process Champion (OND-2022)"** Award.
